## Functions and Signals

### SENSE

The SENSE is used to achieve accurate load regulation at load terminals. This is done by connecting the pins directly to the load's terminals. The use of remote sense has a limit of voltage dropout between converter's output and load terminals of 2% to 5% of voltage output.

When not used, connect +3.3V SENSE to +3.3VDC and +3.3V SENSE RETURN to +3.3VDC RETURN.

When not used connect +5V SENSE to +5VDC and +5V SENSE RETURN to +5VDC RETURN.

### REMOTE ON/OFF Signal (Connector J2, Pin #3)

The remote on/off signal is used to turn the power supply ON and OFF.

OPEN – will turn off the power supply.

SHORT - For normal operation short the signal to signal return.

This signal is TTL, and is referenced to SIGNAL RETURN on connector J2 (Pin #6).

### INPUT STATUS Signal (Connector J1, Pin #7)

This signal shows the status of the input voltage.

Logic '1' – DC input

Logic '0' – AC input

This signal is open collector type, and is referenced to SIGNAL RETURN on connector J2 (Pin #6).

### OUTPUT STATUS Signal (Connector J2, Pin #5)

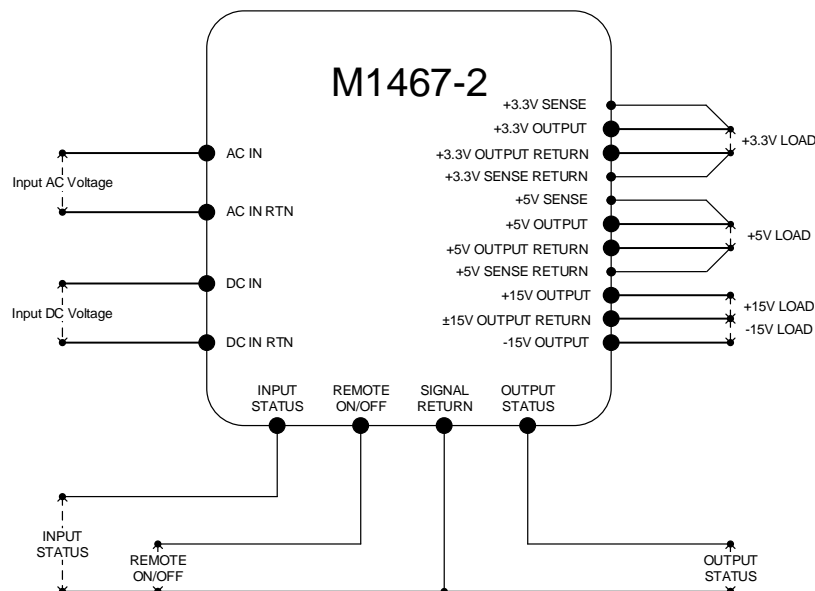

This signal shows the status of all outputs.

Logic '1' - all outputs are within the tolerance of +/-5% of nominal values.

Logic '0' – One output signal is outside the tolerance of +/-5% of nominal value.

This signal is open collector type, and is referenced to SIGNAL RETURN on connector J2 (Pin #6).
