Functions and Signals

INHIBIT (connector J1, pin 3)

The **INHIBIT** signal is used to turn the power supply ON or OFF.

TTL "1" or OPEN – power supply turns ON (For always-on operation, leave this pin unconnected). TTL "0" or SHORT to **SIGNAL IN RTN** – power supply turns OFF.

This signal is referenced to **SIGNAL IN RTN** pin (connector J1, pin 16).

SYNC IN (connector J1, pin 2)

The **SYNC IN** signal is used to synchronize the power supply's switching frequency to an external clock. The external clock frequency is allowed to be 250 kHz ± 10 kHz, with duty-cycle of 50% ± 10%.

When not connected, the power supply will synchronize to its internal clock, set at 250 kHz ± 10 kHz. This signal is referenced to **SYNC IN RTN** pin (connector J1, pin 15).

SYNC OUT (connector J1, pin 14)

The **SYNC OUT** signal is a buffered clock signal that can be used to synchronize other power supplies to the power supply's switching frequency. This feature can be used in a master/slave setup – see typical 3-phase connection diagrams for more information.

This signal is referenced to **SYNC OUT RTN** pin (connector J1, pin 1).

MASTER / SLAVE (connector J2, pin 7)

This signal is used in a three-phase setup – see typical 3-phase connection diagrams for more information.

This signal is referenced to **SIG OUT RTN** pin (connector J2, pin 5).

START 0, START 120, START 240 (connector J2, pins 19, 1 and 16 respectively)

These signals are used in a three-phase setup – see typical 3-phase connection diagrams for more information.

Chassis (connector J1, pin 25)

This pin is connected to the converter's chassis.

FREQ SELECT A, FREQ SELECT B (connector J2, pins 6 & 18, respectively)

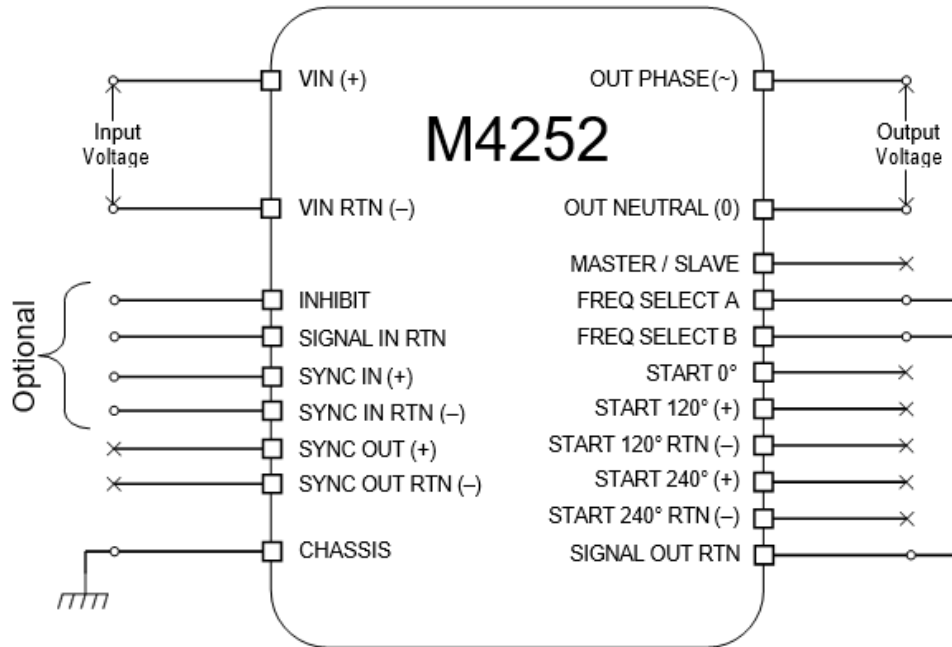

These pins are used to set the output frequency according to the following truth table:

Frequency	FREQ SELECT A (Pin 6)	FREQ SELECT B (Pin 18)
400 Hz	0	0
60 Hz	1	0
50 Hz	0	1
Off	1	1

"0" means the pin is shorted to its reference, "1" means pin is left open. These pins are referenced to **SIGNAL OUT RTN** pin (connector J2, pin 5).

Single-Phase Typical Connection

In this example, the unit is configured to 115 V_{AC}/ 400 Hz

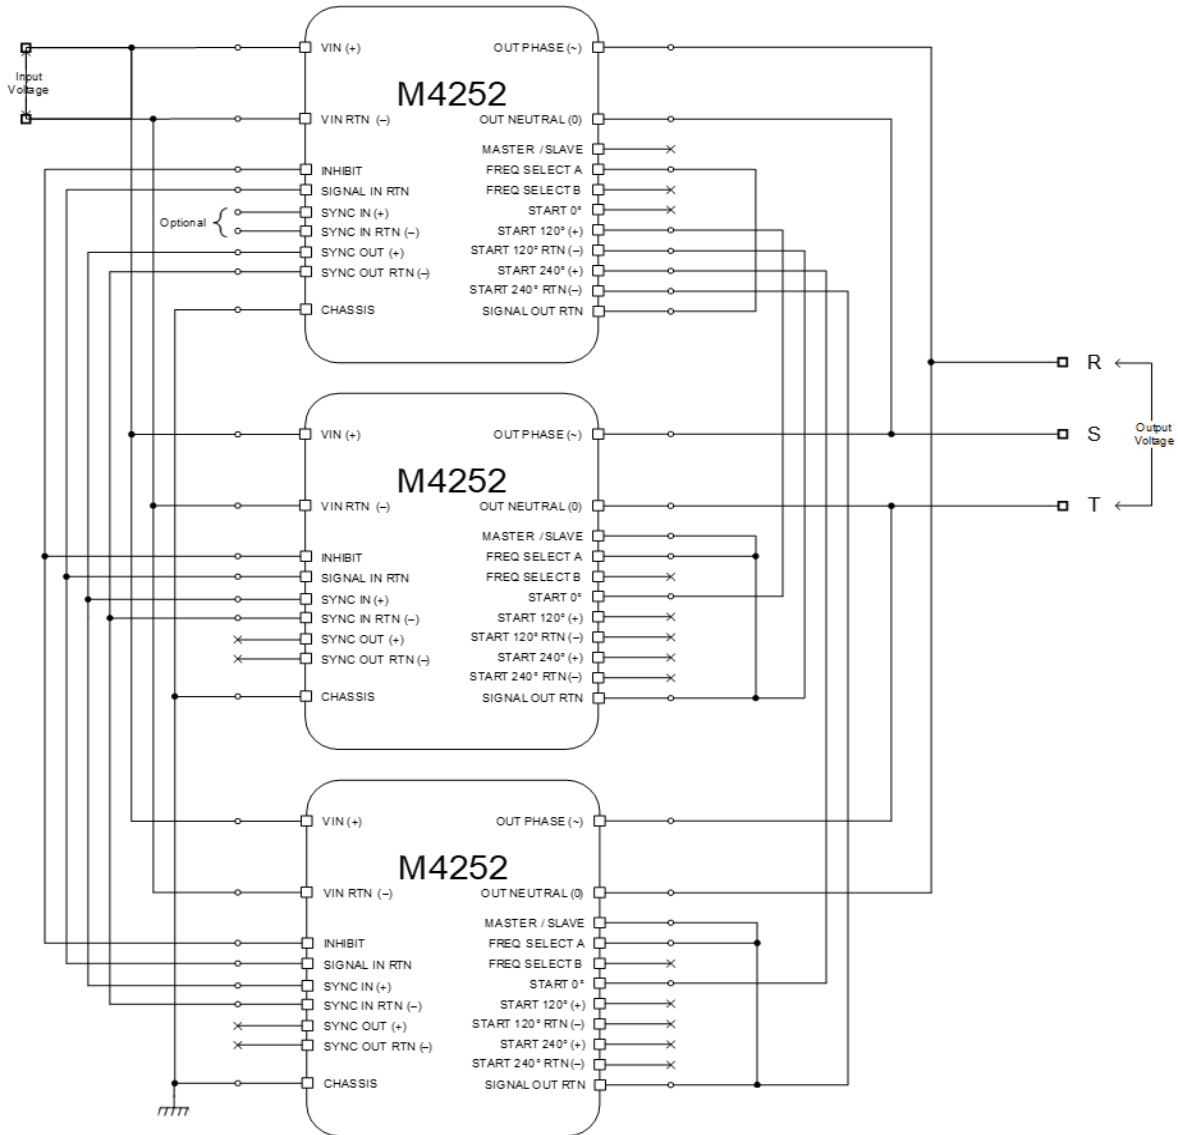

Three-Phase Wye Typical Connection
